

RAVEN provides value-added benefits over traditional CCTV systems. By adding the optional RAVEN service to your UAS Digital CCTV System, you can have the UAS Central Station remotely monitor your unit, confirm an event in progress and inform authorities to take action. RAVEN provides value-added benefits by:

- Going beyond the basic security system by enabling the UAS Central Station to remotely Look-In and Listen-In to events in progress at your property.
- Capturing video and audio of the event in progress at your property, which can aid in arrests and conviction.
- Saving you money by virtually eliminating false alarms at your property.
- Enabling the UAS Central Station to provide a verified alarm for an event in progress at your property which will likely receive a higher priority response from the local authorities.
